

The Energy Trilemma significantly affects the world. It refers to the challenge of balancing three often conflicting objectives in the energy sector of Energy Security (ensuring a reliable and uninterrupted supply of energy), Energy Equity (providing affordable and accessible energy to all) and Environmental Sustainability (minimizing the environmental impact of energy production and consumption, particularly by reducing greenhouse gas emissions and reducing carbon intensity and footprint).

Miller and Lents offers expertise to companies creating ESG decarbonization roadmaps aimed at reducing carbon intensity (such as through CCUS) and greenhouse gas emissions linked to production activities. These services are crucial for organizations seeking to minimize their carbon footprint, adhere to environmental regulations, and meet the growing stakeholder demand for sustainability reporting.

Miller and Lents Services

- ❑ Carbon Intensity Roadmaps
- ❑ Carbon Accounting and Reporting
- ❑ Emissions Database & Information
- ❑ Tracking of GHG Emissions (Scopes 1 and 2)
- ❑ Carbon Footprint Analysis (Fuel & Flare)
- ❑ Decarbonization Strategies
 - ❑ Subsurface Energy Storage (SES)
 - ❑ Low Carbon Technologies (CCUS)
 - ❑ Renewable Energy (Geothermal)
